

**Job Title-** Senior Android Developer

**Qualification-** [B.Tech](#) /[M.Tech](#)/ BS/MS

**Preferred Industry** - Telecom/Mobile/Wireless

**Experience-** 3-5 Years

**About the Role:**

As an Android Developer, you would be working on defining the performance and user experience of mobile applications by strategizing architecturally robust and scalable solutions.

**Key Deliverables & Accountability:**

- Building a high performance, scalable Android App.
- Coordinating with back end (API/DB ) team for efficient solution & smooth integration.
- Periodically review, upgrade the App code base and define a Tech road map.
- Proactively work on improving the various App vitals like Crashes, ANR, battery consumptions, minimizing the number of clicks.
- Unit-test code for robustness, including edge cases, usability, and general reliability.
- Translate business concepts into User Interfaces and build for scalability and performance.

**Skill Set Requirement:**

- Building a high performance, scalable Android App Designing a robust platform for the new features with best design pattern & modularity
- Translate business concepts into User Interfaces and build for scalability,
- Expertise in Java /Kotlin language.
  - Expertise with MVVM architecture, multi-modular Application, Architecture components
  - Familiarity with Material Design guidelines, common mobile UX patterns, and anti-patterns
  - Proficiency in working with remote data via REST API and JSON using Networking Library
  - Detailed understanding with third-party libraries and APIs , FCM Push Notifications, Android Ecosystem, deep linking
  - Quick in debugging - Crashes / ANR, memory leaks, frozen frames, App Startup time, battery optimizations
  - Solid understanding of the full mobile development life cycle.
